PROFESSIONAL SUMMARY

Senior Software Engineer and AI/ML Specialist with 4.3 years of experience architecting scalable enterprise applications and Generative AI solutions. Adept at bridging robust .NET backend services with cutting-edge AI capabilities, specializing in Large Language Models (LLMs), RAG pipelines, and intelligent automation. Currently driving the development of AI-powered document processing and predictive data analytics systems at NAVEX, utilizing Python, backend frameworks, and modern machine learning to deliver high-impact business solutions.

TECHNICAL SKILLS

Data Science & AI: LLMs (OpenAI, Gemini), RAG Architecture, LangChain, NLP, Vector Embeddings, Semantic Search, Python, Pandas, NumPy, Scikit-Learn, OpenCV

Backend: .NET Core, C#, ASP.NET Web API, Python (FastAPI, Flask), RESTful APIs, Microservices

Frontend: React, JavaScript (ES6+), HTML5, CSS3, jQuery, Angular

Databases & Tools: Vector Databases, Microsoft SQL Server, MySQL, Elasticsearch, Kibana, Docker, Kubernetes, Git, CI/CD

WORK EXPERIENCE

Senior Software Engineer | NAVEX India — May 2024 – Present

Tech Stack: Python, LLMs, LangChain, RAG, .NET Core, React, Elasticsearch, SQL Server

- **Generative AI & Document Summarization Engine:** Upgraded an NLP document processing module into an enterprise-grade GenAI solution. Designed RAG pipelines using vector embeddings for intelligent summarization and context-aware Q&A over large compliance datasets.
- **Agentic Workflows & Backend Integration:** Developed production-ready Python backend services and REST APIs to serve AI models, integrating LLM capabilities with existing .NET microservices and enterprise databases.
- **AI-Driven Predictive Risk Analytics:** Engineered an intelligent dashboard using Python (Pandas, Scikit-Learn) for predictive modeling, turning prototypes into automated risk-vector pipelines that reduced audit evaluation cycles.
- **Performance & LLMOps:** Implemented automated testing, observability, and Elasticsearch/Kibana logging pipelines to evaluate model responses and optimize system performance.

Software Engineer | GlobalLogic (Hitachi) — Jun 2022 – Apr 2024

Tech Stack: Python, OpenCV, Pandas, NumPy, .NET, C#, MySQL, REST APIs

- **Healthcare Computer Vision Application:** Developed an end-to-end computer vision ML pipeline using Python, OpenCV, Pandas, and NumPy to analyze facial skin imagery and generate tailored product recommendations.
- **Client GRC System:** Designed high-throughput backend APIs and structured MySQL schemas for core platform modules, including feature-toggle controls.
- Led test automation initiatives and supported CI/CD deployment cycles across staging and production environments.

Intern – Trainee Software Engineer | Cognizant — Jan 2022 – May 2022

Tech Stack:

- Developed full-stack web applications using C#, HTML5, CSS3, and JavaScript, focusing on structured data handling and responsive UI design.

KEY TECHNICAL PROJECTS

- **Duplicate Case Detection System:** Developed an ML solution using NLP vectorization (TF-IDF) and cosine similarity to detect duplicate compliance reports in real time.
- **Car Price Predictor:** Built and deployed a regression model using Scikit-Learn to estimate pre-owned vehicle market values, with robust feature engineering.

EDUCATION & CERTIFICATIONS

Technocrats Institute of Technology, Bhopal — B.Tech in Computer Science and Engineering | CGPA: 8.82/10

Certifications: Data Science and Analytics | Microsoft AI Classroom Series
